

Wireless Water Leakage Detector is a very useful unit, it can work standalone as well as work with the alarm panel. Low power consumption and high sensitive, easy to install, usually it will be installed under the water valve or water pipe to monitor the water leakage. It can use independently or as a front-end detector of an alarm system.

## Specification

Model	WL-100
Working Voltage	9-12VDC;
Battery Life	About 2 years (counted at 3 times each day);
Wireless Frequency	433 MHZ
Transmission Range	100m
Working Current (mA)	10-20mA
Static Current( $\mu$ A)	4-6 $\mu$ A
Operating temperature	10degree - +50degree
Relative humidity	<95%
